Memo

To: George Smith, Ed Wick

From: J. S. O'Brien

Re: Correction of the Escalante Wetlands and Razorback Sucker Spawning Bar Elevations

As we previously discussed, the FLO staff was cognizant of a potential base elevation error in our Escalante Wetland and Razorback Sucker Spawning Bar cross section elevations. After receiving other comments on the potential elevation error, I rechecked the maps and decided to investigate further. As you know we ran into several benchmark elevation problems in the Dinosaur Quarry reach of the Green River. The important benchmark elevation error involves the weatherstation benchmark near the Park Service employee housing.

We used the weatherstation benchmark to assign an elevation to all of our cross section data. This benchmark elevation became the base elevation for our entire study reach. Level loops were initially surveyed around the upstream 6 cross section endpoints and the downstream 10 cross section endpoints. A level loop was then surveyed through middle cross section endpoints tying the upstream and downstream endpoints together using the weatherstation benchmark elevation. We were able to close all the level loops within 0.05 ft. The weatherstation benchmark was labeled with an elevation of 4959.50. Realizing that this was an impossible elevation for this benchmark, we called the USGS for the appropriate elevation. Repeated requests for this information from the USGS were initially unsuccessful, the inference from the USGS was that the benchmark elevation was unavailable. Finally an elevation of 4865.896 was obtained from the USGS. This was a more logical elevation than the 4950.50. At least two independent inquiries to the USGS were made regarding this elevation. Finally, it was decided to use this elevation as the base elevation for our cross section data.

During a recent review of the mapping, it became apparent that the presumed weatherstation elevation was still too high. Additional requests were made to the USGS and they sent us a listing of all the benchmarks in the area. The benchmark with the elevation of 4865.896 was listed as being labeled I 10. This label did not correspond to the weatherstation benchmark. During the recent Ouray Wildlife Refuge survey work, we went to the Dinosaur Quarry area and located the I 10 benchmark along the road up to the Quarry and surveyed the elevation difference between the I 10 and the weatherstation benchmarks. The level loop was surveyed within 0.05 ft. The new weatherstation benchmark elevation is 4766.60, an elevation difference of 99.30 ft compared to the base elevation used in the Escalarite cross section survey.

JAN-01-1900 00:03

In addition, the HEC-2

P.03

correction factor of -99.30 in Field 9 of the X1 card for each cross section. This correction factor is the PXSECE variable. It must appear in each X1 card at the start of each cross section data block in the HEC-2 data file. Consult the HEC-2 manual for further explanation. Using this factor will adjust all the corresponding water surface elevations in the HEC-2 to the correct elevations.

I apologize for the error. I should have obtained the benchmark printout from the USGS staff rather than assume that the verification from the two other independent sources was accurate. I also assumed that because the weatherstation benchmark was labeled 4959.50, the 4865.896 elevation as communicated to me must be correct. As it turned out, the weatherstation elevation of 4766.60 was actually off by almost 200 ft.

Please feel free to distribute this memo with the data base to interested parties.

TOTAL P.03

Discharge measurements in the Green River were obtained from USGS gage # 09261000, 'Green River Near Jensen, UT', approximate Green River Mile (RM) 316.50. The gage is located at Latitude 40°24'34", Longitude 109°14'05" NAD27 in Uintah County, Utah, Hydrologic Unit 14060001.

Discharge measurements in Ashley Creek were obtained from NOAA gage ASHLEY CK - JENSEN, NR, UNION CANAL, BLO (ACJU1). The gage is located at Latitude 40°21'29", Longitude 109°23'13" NAD27 in Uintah County, Utah, Hydrologic Unit 14060002.

The reasons for using gage readings from two different governmental bodies were twofold. First, NOAA discharge readings were used for Ashley Creek because discharge readings were not available through USGS. Second, USGS discharge readings were used for the Green River near Jensen because this is consistent with what the Bureau of Reclamation uses to report flows relative to Flaming Gorge.

In order to estimate flows at the five bottomland sites, flows were taken from the Jensen Gage, lagged by the approximate time it takes for flows to travel from the Jensen Gage to each site. For sites downstream of Ashley Creek, the gaged discharges from Ashley Creek were added to the Green River flows, again lagged by the travel time from the Ashley Creek Gage to the bottomland sites. An average velocity of 2.5 mi/hr (3.67 ft/sec) was utilized for the full range of flows. This velocity was provided by the U.S. Fish and Wildlife Service and the Bureau of Reclamation and is based on exiting models developed by the Bureau to estimate travel time from Flaming Gorge to Jensen Gage. This velocity is in close agreement with values determined by FLO Engineering, Inc. and Tetra Tech, Inc from previous field surveys, HECRAS computations, and level logger data for flows in the Green River ranging between 12,000 cfs and 20,000cfs. It is possible that some attenuation of the hydrograph could occur as the flows pass Jensen Gage and proceed downstream. In general, flows tend to be relatively stable over many days, typical of snow melt events, thus making flow attenuation relatively unlikely. A flood routing analysis for the Green River was not conducted for this study. See the table below for results.

The river velocities presented are average river velocities, which will tend to be higher than velocities on the surface, or the drift velocities of larvae and beads observed by Fish and Wildlife biologists. The slower drift velocities are due to such things as losses from friction, irregular channel geometry and wind at the water surface.

Green River Flow Travel Times

Gage Stations

Name: Green River near Jensen

USGS gage number: 09261000

Latitude: 40 24' 34"

Longitude: 109 14' 05"

Elevation: 4,758' ASL (4,739.37' thalweg based on 0.0003025 assumed constant slope)

Location: Green River RM 316.5

Name: Ashley Creek near Jensen, below Union Canal

USGS gage number: 09271550

Latitude: 40 21' 29"

Longitude: 109 23' 13"

Elevation: 4,740' ASL (4,721.37' thalweg)

Location: 1.7 river miles upstream from confluence with Green River (RM 299.2)

Sites

Name: Thunder Ranch Levee Notch #3

Latitude: 40 25' 27"

Longitude: 109 19' 42"

Thalweg Elevation: 4,724.61

Location (RM): 306.2

Distance downstream from Jensen gage: 10.3

Name: Thunder Ranch Outlet

Latitude: 40 24' 26"

Longitude: 109 19' 51"

Thalweg Elevation: 4,720.97

Location (RM): 305.0

Distance downstream from Jensen gage: 11.5

Name: Ashley Creek confluence with the Green River

Latitude: 40 20' 28"

Longitude: 109 21' 50"

Thalweg Elevation: Unknown (4,711.74')

Location (RM): 299.2

Distance downstream from Jensen gage: 17.3

Distance downstream from Ashley Creek confluence: 0.0

Name: Bonanza Bridge Levee Notch # 2

Latitude: 40 18' 51"

Longitude: 109 29' 14"

Thalweg Elevation: 4,690.5

Location (RM): 289.6

Distance downstream from Jensen gage: 26.9

Distance downstream from Ashley Creek confluence: 9.6

Name: Bonanza Bridge Outlet
Latitude: 40 18' 21"
Longitude: 109 29' 22"
Thalweg Elevation: 4,693.6
Location (RM): 288.9

Distance downstream from Ashley Creek confluence: 10.3

Name: Stirrup Inlet/Outlet
Latitude: 40 17' 05"
Longitude: 109 33' 15"
Thalweg Elevation: 4,677.9
Location (RM): 275.7
Distance downstream from Jensen gage: 40.8
Distance downstream from Ashley Creek confluence: 23.5

Name: Baeser Bend Inlet/Outlet
Latitude: 40 15' 39"
Longitude: 109 35' 46"
Thalweg Elevation: 4,666.8
Location (RM): 272.7
Distance downstream from Jensen gage: 43.8
Distance downstream from Ashley Creek confluence: 26.5

Name: Above Brennan Notch #1
Latitude: 40 14' 40"
Longitude: 109 35' 52"
Thalweg Elevation: 4,663.5
Location (RM): 269.0
Distance downstream from Jensen gage: 47.5
Distance downstream from Ashley Creek confluence: 30.2

Name: Above Brennan Outlet
Latitude: 40 13' 56"
Longitude: 109 35' 40"
Thalweg Elevation: 4,662.2
Location (RM): 267.9
Distance downstream from Jensen gage: 48.6
Distance downstream from Ashley Creek confluence: 31.3

Notes

- Latitude and Longitude points and elevations for each of the USGS gage stations were obtained from the USGS web site (waterdata.usgs.gov).
- Latitude and Longitude points for each of the habitat sites were determined using TopoZone (www.topozone.com). The points are located in the center of the Green River channel, adjacent to each site inlet or outlet, at the specified river mile.
- River miles were identified using the “Green River Wilderness Desolation River Guide” by Laura Evans and Buzz Belknap, Westwater Books, Second Printing (1978).
- Thalweg elevations were estimated by Tetra Tech, Inc., using cross-sectional profiles of the Green River surveyed between 1996 and 1998 and extrapolating up or down stream.

Green River Flow Travel Times

<u>From</u>	<u>To</u>	<u>Miles</u>	<u>Hours</u>	<u>MPH</u>
Jensen Gage	Thunder Ranch	11.5	5	2.3 (2.1–2.9)
Jensen Gage	Ashley Creek Confluence	17.3	7	2.5 (2.1–2.9)
Ashley Creek Gage	Ashley Creek Confluence	1.7	1	1.7
Ashley Creek Confluence	Bonanza Bridge	10.3	4	2.6 (2.2–3.2)
Ashley Creek Confluence	The Stirrup	23.5	11	2.1 (1.9–2.6)
Ashley Creek Confluence	Baeser Bend	26.5	12	2.2 (2.1–2.9)
Ashley Creek Confluence	Above Brennan	30.2	12	2.5 (2.1–2.9)

Notes

- Used thalweg elevations from the Thunder Ranch Outlet to Above Brennan Notch #1 to calculate slope (0.0003025).
- Assumed constant slope from Jensen Gage to Above Brennan.
- Calculated thalweg elevation for the Jensen Gage (4,739.37') and the Ashley Creek Confluence (4,711.74') using constant slope of 0.0003025.
- The thalweg elevation at the Jensen Gage using slope is 18.63' lower than the published elevation for the Jensen Gage (4,758' minus 4,739.37' = 18.63')
- Calculated thalweg elevation for the Ashley Creek Gage by subtracting from the published elevation the same amount as from the Jensen Gage (4,740' minus 18.63' = 4,721.37).
- Travel time between locations based on model developed by Shane Coors (BR-SLC).
- Travel time range is based on a friction factor of 7 ± 10%.
